Abstract not available for DE2709084

Abstract of corresponding document: **US4120597**

A ball and socket joint comprising a ball housing threaded into the socket using a screw-thread of one hand and an annular locking member threaded into the socket and into engagement with the ball housing using a screw-thread of the opposite hand, the annular locking member having an inwardly directed portion at least a part of which is deformed axially into at least one recess in the ball housing to prevent relative rotation between the locking member and the ball housing.
